

TASK 1: Add a SharePoint list as a data source to the app

IMPORTANT! -> Instead of creating the *Device Orders* entity in CDS, we will create it as a SharePoint List.

- 1) Create a SharePoint list named *Device Orders* with the following fields:
 - a. *Title* (created automatically when the list is created).
 - b. *Price*: Currency.
 - c. *Approver*: Person.
 - d. *Comments*: Multiple lines of Text.
 - e. *Request Date*: Date.
- 2) Add it to Data Sources in the Power App.
